

VERANDAHS, LOGGIAS AND COLONNADES GALLERY SHEET

Verandahs, loggias and colonnades are one of the main ways in which our columns add great value to the appearance of a home or commercial building. We find that the most popular diameters are the Verona 210 and Carrara 240 and they are used at a height of around 2.2 metres average. Our customers tell us that the most pleasing setout seems to be a square between the columns. Call us today for some verandah design ideas.
